

Ibrahim Saheed

Hammond, LA • ibrahimsaheed.dev • github.com/ibrahimsaheed • F-1 Student / OPT Eligible

Technical Program Manager Intern • Summer 2027

SUMMARY

IT undergraduate building toward cloud and infrastructure roles, with hands-on experience shipping full-stack products and coordinating cross-functional teams under hackathon conditions. Comfortable bridging technical and non-technical stakeholders, managing scope, and driving projects from ambiguous idea to deployed product. Seeking a TPM internship to apply systems thinking and project coordination skills at scale.

EDUCATION

B.S. Information Technology — Southeastern Louisiana University *Expected Dec 2027*

Relevant Coursework: Computer Networks & Data Communications (CMPS 3900) • Database Management (CMPS 2850) • Systems Analysis & Design (CMPS 2800) • Data Structures (CMPS 2570) • Computer Science II (CMPS 161)

PROJECTS

PridePath — AI Study Companion — pridepath.vercel.app *Jan 2025*

- Built the end-to-end AI integration using the OpenAI API to convert uploaded course materials into interactive quiz games, reducing student study setup time from hours to minutes.
- Led feature prioritization and task allocation with a teammate under 24-hour hackathon constraints, shipping a functional MVP at SLU's inaugural LionHacks — the university's first-ever hackathon.
- Architected and deployed a full-stack production system on Vercel with a Supabase PostgreSQL backend, supporting real-time AI-powered quiz generation for live demo users.

Vault — Budget Tracker — vault.ibrahimsaheed.dev *2024 – Present*

- Architected and shipped a full-stack personal finance tracker, then led a strategic migration to a client-side localStorage demo mode — enabling zero-auth, frictionless access for portfolio visitors.
- Managed the full project lifecycle: scoped requirements, prioritized the demo-mode refactor as the highest-value unblocking task, and extracted the project into a standalone GitHub repo (ibrahimsaheed/budget-demo).
- Delivered a responsive, production-grade interface using Next.js 15, TypeScript, and Tailwind CSS v4 — deployed on Vercel with Cloudflare DNS for reliability and fast global load times.

EXPERIENCE

Server | Manedish (Aramark) | Hammond, LA *2024 – Present*

- Manage service across multiple concurrent tables during peak dining hours, consistently meeting order accuracy and timing expectations in a fast-paced, customer-facing environment.
- Coordinate in real time between front-of-house and kitchen teams to identify and resolve order discrepancies before they reach the customer — directly exercising the cross-functional communication skills central to TPM roles.
- Prioritize competing demands across simultaneous tables and shifting team needs, developing the operational judgment and composure under pressure that translates directly to managing complex technical programs.

SKILLS & CERTIFICATIONS

Languages & Frameworks: Python • JavaScript / TypeScript • React • Next.js • HTML / CSS • Tailwind CSS

Tools & Platforms: Git / GitHub • Linux (WSL2 / Ubuntu) • Vercel • Cloudflare • Supabase • Resend

Cloud: AWS (EC2, IAM, S3, Security Groups, CLI) — SAA-C03 Certification In Progress

PM & Collaboration: Scope management • Stakeholder communication • Agile / iterative delivery • Technical documentation
